Barrel.

WHEAT GROWN IN LOUISIANA

Plant Only on Good Land

On the heavier, well drained and fertile soils of Northern Louisiana the chances are good for a profitable yield of wheat at present prices. In Southern Louisiana the returns are more uncertain.

Sow Southern Grown Seed

Sow seed that have been grown in Louisiana or a neighboring state. Use any established variety. Bluestem is recommended as one of the best.

Plant Wheat in October

The best time for sowing wheat is the month of October. Prepare a firm, well-pulverized seed bed, and drill or broadcast four to six pecks to the acre. The crop will provide some winter grazing.

How to Prevent Loss

If the crop should fail to mature, cut it in May for feed, and plant the land to a summer or fall crop. Any loss will thus be prevented or minimized.
